THE COMPLETE EXERCISE COACHING MANUAL

320 exercise prescriptions | 16 anatomical and functional categories | Trainer reference edition • November 2026

Audience: fitness coaches, exercise professionals, trainees and educational AI systems. This is a practical teaching reference, not a substitute for individualized medical or physiotherapy assessment.

Equipment classification: MACHINE = cable/selectorized/plate-loaded gym apparatus; FREE WEIGHTS = dumbbells, barbells, kettlebells and medicine balls; BODYWEIGHT = no external load; ACCESSORY = bands, sleds, ropes, ab wheels, benches or rollers. Machines are resistance equipment, not automatically moving exercise devices. When multiple options are listed, use the named variation appropriate to the person and available equipment.

How to use this manual

• Each of the 160 distinct movements has two programmed variations (foundational and progressive), giving 320 exercise prescriptions. Variations share the same fundamental movement but differ in resistance/tempo and dosing.

• Prescriptions are starting points for generally healthy adults. Start at an effort of approximately RPE 5–7/10, keep 1–4 repetitions in reserve, and progress only with stable technique and recovery.

• Rest 60–120 seconds for typical accessory sets; 2–3 minutes for demanding multi-joint strength sets. Warm up 5–10 minutes with easy movement and task-specific lighter sets.

• For aerobic conditioning, begin with tolerable intervals and work toward 150–300 minutes per week of moderate-intensity aerobic activity or 75–150 minutes vigorous activity, plus strengthening on at least 2 days weekly.

• Pain that is sharp, worsening, radiating, associated with numbness or instability is a reason to stop and reassess. Seek urgent help for chest pain, fainting, severe breathlessness or neurological symptoms.

• Technique descriptions are cues, not individualized biomechanical prescriptions; adjust range, grip and stance for comfort, anatomy, disability and equipment.

Programming by goal

• Fat loss: combine a sustainable nutrition plan with 2–4 weekly resistance sessions, aerobic activity and increased daily movement. Exercise does not selectively burn fat from a chosen body part.

• Muscle gain: train major muscle groups at least twice weekly where feasible; accumulate a tolerable volume, typically starting around 6–10 challenging weekly sets per muscle group and adjusting based on recovery.

• Maximal strength: emphasize major compound lifts, often 3–6 sets of 2–6 repetitions with longer rests and appropriate supervision; not every exercise in this guide is suitable for low-repetition loading.

• General health: include aerobic conditioning, resistance training, balance, flexibility and enjoyable physical activity. Older adults benefit from multicomponent balance and functional training.

• Recovery: use gradual progression, sufficient sleep, hydration and energy intake; reduce load during illness, injury flare-ups or persistent excessive fatigue.

Screening and special populations

Ask about cardiovascular symptoms, known heart/lung disease, uncontrolled blood pressure, pregnancy, recent surgery, falls, neurological deficits, joint instability, medications and previous injury. Modify training for osteoporosis, arthritis, diabetes, pregnancy and disability with qualified guidance when indicated. Avoid breath-holding under heavy strain in people for whom it is contraindicated. For balance-limited individuals provide stable support. For pregnant/postpartum clients, obtain appropriate individualized clearance and avoid assuming all exercises are suitable.

Exercise catalog

Chest

001. Push-up — Foundational / light resistance

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Targets: pectoralis major, triceps. **Level:** Beginner.

Execution: Set hands beneath or slightly wider than shoulders; brace and lower chest between hands; press up without sagging. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops pectoralis major, triceps strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

002. Push-up — Progressive / loaded or tempo

Targets: pectoralis major, triceps. **Level:** Intermediate.

Execution: Set hands beneath or slightly wider than shoulders; brace and lower chest between hands; press up without sagging. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops pectoralis major, triceps strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Foundational variation; start with the lowest manageable resistance.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

003. Bench press — Foundational / light resistance

Targets: pectoralis major, triceps. **Level:** Beginner.

Execution: Retract shoulder blades; keep feet planted; lower bar under control to lower chest and press vertically. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Progressive variation; add resistance only if technique is controlled.

Benefit: Develops pectoralis major, triceps strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

004. Bench press — Progressive / loaded or tempo

Targets: pectoralis major, triceps. **Level:** Intermediate.

Execution: Retract shoulder blades; keep feet planted; lower bar under control to lower chest and press vertically. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Foundational variation; start with the lowest manageable resistance.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops pectoralis major, triceps strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

005. Dumbbell floor press — Foundational / light resistance

Targets: pectoralis major, triceps. **Level:** Beginner.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Progressive variation; add resistance only if technique is controlled.

Execution: Lie on floor with knees bent; lower elbows until upper arms touch lightly; press without bouncing. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops pectoralis major, triceps strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

006. Dumbbell floor press — Progressive / loaded or tempo

Equipment / modality: Dumbbells/barbell or incline chest-press machine | Training mode: Foundational variation; start with the lowest manageable resistance.

Targets: pectoralis major, triceps. **Level:** Intermediate.

Execution: Lie on floor with knees bent; lower elbows until upper arms touch lightly; press without bouncing. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops pectoralis major, triceps strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Dumbbells/barbell or incline chest-press machine | Training mode: Progressive variation; add resistance only if technique is controlled.

007. Incline press — Foundational / light resistance

Targets: upper pectoralis, triceps. **Level:** Beginner.

Execution: Set bench to a modest incline; lower handles to upper chest with wrists stacked; press smoothly. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops upper pectoralis, triceps strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Dumbbells or pec-deck machine | Training mode: Foundational variation; start with the lowest manageable resistance.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

008. Incline press — Progressive / loaded or tempo

Targets: upper pectoralis, triceps. **Level:** Intermediate.

Execution: Set bench to a modest incline; lower handles to upper chest with wrists stacked; press smoothly. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Dumbbells or pec-deck machine | Training mode: Progressive variation; add resistance only if technique is controlled.

Benefit: Develops upper pectoralis, triceps strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

009. Chest fly — Foundational / light resistance

Targets: pectoralis major. **Level:** Beginner.

Execution: Maintain soft elbows; open arms in a wide arc to a comfortable stretch; bring hands together without clashing. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Equipment / modality: Cable/selectorized resistance machine | Training mode: Foundational variation; start with the lowest manageable resistance.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops pectoralis major strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

010. Chest fly — Progressive / loaded or tempo

Targets: pectoralis major. **Level:** Intermediate.

Equipment / modality: Cable/selectorized resistance machine | Training mode: Progressive variation; add resistance only if technique is controlled.

Execution: Maintain soft elbows; open arms in a wide arc to a comfortable stretch; bring hands together without clashing. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops pectoralis major strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

011. Cable crossover — Foundational / light resistance

Equipment / modality: Bodyweight on parallel bars or assisted-dip machine | Training mode: Foundational variation; start with the lowest manageable resistance.

Targets: pectoralis major. **Level:** Beginner.

Execution: Set cables slightly above shoulder level; step forward, brace and sweep hands together across chest. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops pectoralis major strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Bodyweight on parallel bars or assisted-dip machine | Training mode: Progressive variation; add resistance only if technique is controlled.

012. Cable crossover — Progressive / loaded or tempo

Targets: pectoralis major. **Level:** Intermediate.

Execution: Set cables slightly above shoulder level; step forward, brace and sweep hands together across chest. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops pectoralis major strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Foundational variation; start with the lowest manageable resistance.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

013. Dip — Foundational / light resistance

Targets: lower pectoralis, triceps. **Level:** Beginner.

Execution: Support body on bars; lean slightly forward; descend within shoulder comfort and press back up. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Progressive variation; add resistance only if technique is controlled.

Benefit: Develops lower pectoralis, triceps strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

014. Dip — Progressive / loaded or tempo

Targets: lower pectoralis, triceps. **Level:** Intermediate.

Execution: Support body on bars; lean slightly forward; descend within shoulder comfort and press back up. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Equipment / modality: Bodyweight (palms pressed) or resistance band | Training mode: Foundational variation; start with the lowest manageable resistance.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops lower pectoralis, triceps strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

015. Squeeze press — Foundational / light resistance

Targets: pectoralis major. **Level:** Beginner.

Equipment / modality: Bodyweight (palms pressed) or resistance band | Training mode: Progressive variation; add resistance only if technique is controlled.

Execution: Press dumbbells together over chest throughout a controlled lowering and pressing arc. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops pectoralis major strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

016. Squeeze press — Progressive / loaded or tempo

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Targets: pectoralis major. **Level:** Intermediate.

Execution: Press dumbbells together over chest throughout a controlled lowering and pressing arc. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops pectoralis major strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

017. Isometric chest press — Foundational / light resistance

Targets: pectoralis major. **Level:** Beginner.

Execution: Press palms or a ball together at sternum height; maintain breathing and steady tension. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops pectoralis major strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Bodyweight on bar or assisted-pull-up machine | Training mode: Foundational variation; start with the lowest manageable resistance.

018. Isometric chest press — Progressive / loaded or tempo

Targets: pectoralis major. **Level:** Intermediate.

Execution: Press palms or a ball together at sternum height; maintain breathing and steady tension. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops pectoralis major strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Bodyweight on bar or assisted-pull-up machine | Training mode: Progressive variation; add resistance only if technique is controlled.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

019. Scapular push-up — Foundational / light resistance

Targets: serratus anterior. **Level:** Beginner.

Execution: Hold a straight-arm plank; move shoulder blades together then spread them without bending elbows. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Cable/selectorized resistance machine | Training mode: Foundational variation; start with the lowest manageable resistance.

Benefit: Develops serratus anterior strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

020. Scapular push-up — Progressive / loaded or tempo

Targets: serratus anterior. **Level:** Intermediate.

Execution: Hold a straight-arm plank; move shoulder blades together then spread them without bending elbows. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Equipment / modality: Cable/selectorized resistance machine | Training mode: Progressive variation; add resistance only if technique is controlled.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops serratus anterior strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Upper back and lats

021. Pull-up — Foundational / light resistance

Equipment / modality: Cable/selectorized resistance machine | Training mode: Foundational variation; start with the lowest manageable resistance.

Targets: latissimus dorsi, elbow flexors. **Level:** Beginner.

Execution: Start from active hang; drive elbows toward ribs; lift chin above bar without swinging. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops latissimus dorsi, elbow flexors strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Cable/selectorized resistance machine | Training mode: Progressive variation; add resistance only if technique is controlled.

022. Pull-up — Progressive / loaded or tempo

Targets: latissimus dorsi, elbow flexors. **Level:** Intermediate.

Execution: Start from active hang; drive elbows toward ribs; lift chin above bar without swinging. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops latissimus dorsi, elbow flexors strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Barbell or dumbbells | Training mode: Foundational variation; start with the lowest manageable resistance.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

023. Lat pulldown — Foundational / light resistance

Targets: latissimus dorsi. **Level:** Beginner.

Execution: Sit tall and brace; pull bar to upper chest with elbows moving down; return slowly. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Barbell or dumbbells | Training mode: Progressive variation; add resistance only if technique is controlled.

Benefit: Develops latissimus dorsi strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

024. Lat pulldown — Progressive / loaded or tempo

Targets: latissimus dorsi. **Level:** Intermediate.

Execution: Sit tall and brace; pull bar to upper chest with elbows moving down; return slowly. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Equipment / modality: Dumbbells on incline bench or chest-supported row machine | Training mode: Foundational variation; start with the lowest manageable resistance.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops latissimus dorsi strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

025. Seated cable row — Foundational / light resistance

Targets: rhomboids, middle trapezius. **Level:** Beginner.

Equipment / modality: Dumbbells on incline bench or chest-supported row machine | Training mode: Progressive variation; add resistance only if technique is controlled.

Execution: Keep torso stable; pull handle toward lower ribs; squeeze shoulder blades without shrugging. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops rhomboids, middle trapezius strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

026. Seated cable row — Progressive / loaded or tempo

Equipment / modality: Dumbbell or cable machine | Training mode: Foundational variation; start with the lowest manageable resistance.

Targets: rhomboids, middle trapezius. **Level:** Intermediate.

Execution: Keep torso stable; pull handle toward lower ribs; squeeze shoulder blades without shrugging. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops rhomboids, middle trapezius strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Dumbbell or cable machine | Training mode: Progressive variation; add resistance only if technique is controlled.

027. Bent-over row — Foundational / light resistance

Targets: lats, rhomboids. **Level:** Beginner.

Execution: Hinge at hips with neutral spine; pull weight toward waist; lower without jerking. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops lats, rhomboids strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Cable/selectorized resistance machine | Training mode: Foundational variation; start with the lowest manageable resistance.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

028. Bent-over row — Progressive / loaded or tempo

Targets: lats, rhomboids. **Level:** Intermediate.

Execution: Hinge at hips with neutral spine; pull weight toward waist; lower without jerking. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Cable/selectorized resistance machine | Training mode: Progressive variation; add resistance only if technique is controlled.

Benefit: Develops lats, rhomboids strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

029. Chest-supported row — Foundational / light resistance

Targets: middle back. **Level:** Beginner.

Execution: Support chest on bench; draw elbows backward and lower weights with control. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops middle back strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

030. Chest-supported row — Progressive / loaded or tempo

Targets: middle back. **Level:** Intermediate.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Execution: Support chest on bench; draw elbows backward and lower weights with control. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops middle back strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

031. Single-arm row — Foundational / light resistance

Equipment / modality: Cable machine or resistance band | Training mode: Foundational variation; start with the lowest manageable resistance.

Targets: lats, rhomboids. **Level:** Beginner.

Execution: Support free hand; keep pelvis square; pull elbow toward hip and resist trunk rotation. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops lats, rhomboids strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Cable machine or resistance band | Training mode: Progressive variation; add resistance only if technique is controlled.

032. Single-arm row — Progressive / loaded or tempo

Targets: lats, rhomboids. **Level:** Intermediate.

Execution: Support free hand; keep pelvis square; pull elbow toward hip and resist trunk rotation. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops lats, rhomboids strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

033. Straight-arm pulldown — Foundational / light resistance

Targets: latissimus dorsi. **Level:** Beginner.

Execution: Keep elbows slightly bent; pull handle from shoulder height toward thighs without leaning. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Benefit: Develops latissimus dorsi strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

034. Straight-arm pulldown — Progressive / loaded or tempo

Targets: latissimus dorsi. **Level:** Intermediate.

Execution: Keep elbows slightly bent; pull handle from shoulder height toward thighs without leaning. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Foundational variation; start with the lowest manageable resistance.

Benefit: Develops latissimus dorsi strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

035. Inverted row — Foundational / light resistance

Targets: upper back, biceps. **Level:** Beginner.

Execution: Keep body rigid beneath bar; pull chest toward bar; lower until arms extend. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Progressive variation; add resistance only if technique is controlled.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops upper back, biceps strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

036. Inverted row — Progressive / loaded or tempo

Targets: upper back, biceps. **Level:** Intermediate.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Foundational variation; start with the lowest manageable resistance.

Execution: Keep body rigid beneath bar; pull chest toward bar; lower until arms extend. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops upper back, biceps strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

037. Face pull — Foundational / light resistance

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Progressive variation; add resistance only if technique is controlled.

Targets: rear deltoid, external rotators. **Level:** Beginner.

Execution: Pull rope toward forehead while spreading hands; keep ribs down and neck relaxed. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops rear deltoid, external rotators strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Foundational variation; start with the lowest manageable resistance.

038. Face pull — Progressive / loaded or tempo

Targets: rear deltoid, external rotators. **Level:** Intermediate.

Execution: Pull rope toward forehead while spreading hands; keep ribs down and neck relaxed. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops rear deltoid, external rotators strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Progressive variation; add resistance only if technique is controlled.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

039. Scapular pull-up — Foundational / light resistance

Targets: lower trapezius, lats. **Level:** Beginner.

Execution: Hang with elbows straight; depress shoulder blades to lift body slightly; release slowly. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Foundational variation; start with the lowest manageable resistance.

Benefit: Develops lower trapezius, lats strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

040. Scapular pull-up — Progressive / loaded or tempo

Targets: lower trapezius, lats. **Level:** Intermediate.

Execution: Hang with elbows straight; depress shoulder blades to lift body slightly; release slowly. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Progressive variation; add resistance only if technique is controlled.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops lower trapezius, lats strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Shoulders

041. Overhead press — Foundational / light resistance

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Foundational variation; start with the lowest manageable resistance.

Targets: deltoids, triceps. **Level:** Beginner.

Execution: Brace glutes and abdomen; press weight overhead in a close path; avoid excessive back arch. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops deltoids, triceps strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Progressive variation; add resistance only if technique is controlled.

042. Overhead press — Progressive / loaded or tempo

Targets: deltoids, triceps. **Level:** Intermediate.

Execution: Brace glutes and abdomen; press weight overhead in a close path; avoid excessive back arch. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops deltoids, triceps strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Foundational variation; start with the lowest manageable resistance.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

043. Lateral raise — Foundational / light resistance

Targets: middle deltoid. **Level:** Beginner.

Execution: Lift arms out to sides with slight elbow bend to shoulder height; lower slowly. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Progressive variation; add resistance only if technique is controlled.

Benefit: Develops middle deltoid strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

044. Lateral raise — Progressive / loaded or tempo

Targets: middle deltoid. **Level:** Intermediate.

Execution: Lift arms out to sides with slight elbow bend to shoulder height; lower slowly. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Equipment / modality: Resistance band or cable machine | Training mode: Foundational variation; start with the lowest manageable resistance.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops middle deltoid strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

045. Front raise — Foundational / light resistance

Targets: anterior deltoid. **Level:** Beginner.

Equipment / modality: Resistance band or cable machine | Training mode: Progressive variation; add resistance only if technique is controlled.

Execution: Raise arms in front to shoulder height with ribs stacked over pelvis. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops anterior deltoid strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

046. Front raise — Progressive / loaded or tempo

Equipment / modality: Resistance band or cable machine | Training mode: Foundational variation; start with the lowest manageable resistance.

Targets: anterior deltoid. **Level:** Intermediate.

Execution: Raise arms in front to shoulder height with ribs stacked over pelvis. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops anterior deltoid strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Resistance band or cable machine | Training mode: Progressive variation; add resistance only if technique is controlled.

047. Reverse fly — Foundational / light resistance

Targets: posterior deltoid. **Level:** Beginner.

Execution: Hinge or use chest support; open arms outward without shrugging or swinging. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops posterior deltoid strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

048. Reverse fly — Progressive / loaded or tempo

Targets: posterior deltoid. **Level:** Intermediate.

Execution: Hinge or use chest support; open arms outward without shrugging or swinging. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Benefit: Develops posterior deltoid strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

049. Arnold press — Foundational / light resistance

Targets: deltoids. **Level:** Beginner.

Execution: Start palms facing inward at shoulders; rotate outward as weights press overhead; reverse slowly. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Equipment / modality: Bodyweight or light dumbbells | Training mode: Foundational variation; start with the lowest manageable resistance.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops deltoids strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

050. Arnold press — Progressive / loaded or tempo

Targets: deltoids. **Level:** Intermediate.

Equipment / modality: Bodyweight or light dumbbells | Training mode: Progressive variation; add resistance only if technique is controlled.

Execution: Start palms facing inward at shoulders; rotate outward as weights press overhead; reverse slowly. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops deltoids strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

051. Landmine press — Foundational / light resistance

Targets: anterior deltoid, serratus. **Level:** Beginner.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Foundational variation; start with the lowest manageable resistance.

Execution: Press angled bar up and forward while keeping trunk steady and shoulder comfortable. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops anterior deltoid, serratus strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

052. Landmine press — Progressive / loaded or tempo

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Progressive variation; add resistance only if technique is controlled.

Targets: anterior deltoid, serratus. **Level:** Intermediate.

Execution: Press angled bar up and forward while keeping trunk steady and shoulder comfortable. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops anterior deltoid, serratus strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Foundational variation; start with the lowest manageable resistance.

053. External rotation — Foundational / light resistance

Targets: rotator cuff. **Level:** Beginner.

Execution: Keep elbow near side or supported; rotate forearm outward through controlled range. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops rotator cuff strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Progressive variation; add resistance only if technique is controlled.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

054. External rotation — Progressive / loaded or tempo

Targets: rotator cuff. **Level:** Intermediate.

Execution: Keep elbow near side or supported; rotate forearm outward through controlled range. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Foundational variation; start with the lowest manageable resistance.

Benefit: Develops rotator cuff strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

055. Internal rotation — Foundational / light resistance

Targets: subscapularis. **Level:** Beginner.

Execution: Keep elbow tucked and rotate forearm inward against light resistance without twisting trunk. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Progressive variation; add resistance only if technique is controlled.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops subscapularis strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

056. Internal rotation — Progressive / loaded or tempo

Targets: subscapularis. **Level:** Intermediate.

Equipment / modality: Dumbbell/EZ-bar or preacher-curl machine | Training mode: Foundational variation; start with the lowest manageable resistance.

Execution: Keep elbow tucked and rotate forearm inward against light resistance without twisting trunk. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops subscapularis strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

057. Wall slide — Foundational / light resistance

Equipment / modality: Dumbbell/EZ-bar or preacher-curl machine | Training mode: Progressive variation; add resistance only if technique is controlled.

Targets: serratus, lower trapezius. **Level:** Beginner.

Execution: Keep forearms against wall; slide upward while reaching gently and avoiding rib flare. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops serratus, lower trapezius strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Foundational variation; start with the lowest manageable resistance.

058. Wall slide — Progressive / loaded or tempo

Targets: serratus, lower trapezius. **Level:** Intermediate.

Execution: Keep forearms against wall; slide upward while reaching gently and avoiding rib flare. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops serratus, lower trapezius strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Progressive variation; add resistance only if technique is controlled.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

059. Y raise — Foundational / light resistance

Targets: lower trapezius. **Level:** Beginner.

Execution: With chest supported, lift arms diagonally overhead in Y shape without shrugging. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Foundational variation; start with the lowest manageable resistance.

Benefit: Develops lower trapezius strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

060. Y raise — Progressive / loaded or tempo

Targets: lower trapezius. **Level:** Intermediate.

Execution: With chest supported, lift arms diagonally overhead in Y shape without shrugging. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Progressive variation; add resistance only if technique is controlled.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops lower trapezius strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Biceps and elbow flexors

061. Supinated curl — Foundational / light resistance

Equipment / modality: Cable/selectorized resistance machine | Training mode: Foundational variation; start with the lowest manageable resistance.

Targets: biceps brachii. **Level:** Beginner.

Execution: Keep elbows near ribs; curl palms up without swinging; lower fully under control. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops biceps brachii strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Cable/selectorized resistance machine | Training mode: Progressive variation; add resistance only if technique is controlled.

062. Supinated curl — Progressive / loaded or tempo

Targets: biceps brachii. **Level:** Intermediate.

Execution: Keep elbows near ribs; curl palms up without swinging; lower fully under control. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops biceps brachii strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Foundational variation; start with the lowest manageable resistance.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

063. Hammer curl — Foundational / light resistance

Targets: brachialis, brachioradialis. **Level:** Beginner.

Execution: Keep palms facing inward; curl while maintaining neutral wrists and still shoulders. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Progressive variation; add resistance only if technique is controlled.

Benefit: Develops brachialis, brachioradialis strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

064. Hammer curl — Progressive / loaded or tempo

Targets: brachialis, brachioradialis. **Level:** Intermediate.

Execution: Keep palms facing inward; curl while maintaining neutral wrists and still shoulders. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Equipment / modality: Dumbbell or resistance band | Training mode: Foundational variation; start with the lowest manageable resistance.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops brachialis, brachioradialis strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

065. Incline curl — Foundational / light resistance

Targets: biceps brachii. **Level:** Beginner.

Equipment / modality: Dumbbell or resistance band | Training mode: Progressive variation; add resistance only if technique is controlled.

Execution: Sit on incline bench with arms hanging; curl without drifting elbows forward. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops biceps brachii strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

066. Incline curl — Progressive / loaded or tempo

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Targets: biceps brachii. **Level:** Intermediate.

Execution: Sit on incline bench with arms hanging; curl without drifting elbows forward. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops biceps brachii strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

067. Preacher curl — Foundational / light resistance

Targets: biceps brachii. **Level:** Beginner.

Execution: Rest upper arms on pad; curl through pain-free range without snapping elbows straight. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops biceps brachii strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

068. Preacher curl — Progressive / loaded or tempo

Targets: biceps brachii. **Level:** Intermediate.

Execution: Rest upper arms on pad; curl through pain-free range without snapping elbows straight. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops biceps brachii strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

069. Concentration curl — Foundational / light resistance

Targets: biceps brachii. **Level:** Beginner.

Execution: Brace upper arm against inner thigh; curl smoothly without torso rotation. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Cable/selectorized resistance machine | Training mode: Foundational variation; start with the lowest manageable resistance.

Benefit: Develops biceps brachii strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

070. Concentration curl — Progressive / loaded or tempo

Targets: biceps brachii. **Level:** Intermediate.

Execution: Brace upper arm against inner thigh; curl smoothly without torso rotation. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Equipment / modality: Cable/selectorized resistance machine | Training mode: Progressive variation; add resistance only if technique is controlled.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops biceps brachii strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

071. Reverse curl — Foundational / light resistance

Targets: brachioradialis. **Level:** Beginner.

Equipment / modality: Free weights or bodyweight, depending on variation and equipment availability | Training mode: Foundational variation; start with the lowest manageable resistance.

Execution: Use overhand grip; curl with neutral wrists and controlled elbows. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops brachioradialis strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

072. Reverse curl — Progressive / loaded or tempo

Equipment / modality: Free weights or bodyweight, depending on variation and equipment availability | Training mode: Progressive variation; add resistance only if technique is controlled.

Targets: brachioradialis. **Level:** Intermediate.

Execution: Use overhand grip; curl with neutral wrists and controlled elbows. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops brachioradialis strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Foundational variation; start with the lowest manageable resistance.

073. Cable curl — Foundational / light resistance

Targets: biceps brachii. **Level:** Beginner.

Execution: Stand tall facing low pulley; curl handle without leaning back. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops biceps brachii strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Progressive variation; add resistance only if technique is controlled.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

074. Cable curl — Progressive / loaded or tempo

Targets: biceps brachii. **Level:** Intermediate.

Execution: Stand tall facing low pulley; curl handle without leaning back. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Benefit: Develops biceps brachii strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

075. Spider curl — Foundational / light resistance

Targets: biceps brachii. **Level:** Beginner.

Execution: Lie chest-down on incline; let arms hang and curl without swinging. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops biceps brachii strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

076. Spider curl — Progressive / loaded or tempo

Targets: biceps brachii. **Level:** Intermediate.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Foundational variation; start with the lowest manageable resistance.

Execution: Lie chest-down on incline; let arms hang and curl without swinging. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops biceps brachii strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

077. Isometric curl hold — Foundational / light resistance

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Progressive variation; add resistance only if technique is controlled.

Targets: elbow flexors. **Level:** Beginner.

Execution: Hold elbow near 90 degrees against resistance; breathe steadily and avoid shrugging. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops elbow flexors strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Foundational variation; start with the lowest manageable resistance.

078. Isometric curl hold — Progressive / loaded or tempo

Targets: elbow flexors. **Level:** Intermediate.

Execution: Hold elbow near 90 degrees against resistance; breathe steadily and avoid shrugging. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops elbow flexors strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Progressive variation; add resistance only if technique is controlled.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

079. Chin-up — Foundational / light resistance

Targets: biceps, lats. **Level:** Beginner.

Execution: Use underhand grip; pull elbows down until chin clears bar; lower under control. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Foundational variation; start with the lowest manageable resistance.

Benefit: Develops biceps, lats strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

080. Chin-up — Progressive / loaded or tempo

Targets: biceps, lats. **Level:** Intermediate.

Execution: Use underhand grip; pull elbows down until chin clears bar; lower under control. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Progressive variation; add resistance only if technique is controlled.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops biceps, lats strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Triceps

081. Close-grip push-up — Foundational / light resistance

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Targets: triceps, chest. **Level:** Beginner.

Execution: Place hands just inside shoulder width; keep elbows tracking backward and body aligned. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops triceps, chest strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

082. Close-grip push-up — Progressive / loaded or tempo

Targets: triceps, chest. **Level:** Intermediate.

Execution: Place hands just inside shoulder width; keep elbows tracking backward and body aligned. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops triceps, chest strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Resistance band or cable machine | Training mode: Foundational variation; start with the lowest manageable resistance.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

083. Triceps pressdown — Foundational / light resistance

Targets: triceps brachii. **Level:** Beginner.

Execution: Keep elbows pinned near sides; straighten elbows and return without moving shoulders. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Resistance band or cable machine | Training mode: Progressive variation; add resistance only if technique is controlled.

Benefit: Develops triceps brachii strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

084. Triceps pressdown — Progressive / loaded or tempo

Targets: triceps brachii. **Level:** Intermediate.

Execution: Keep elbows pinned near sides; straighten elbows and return without moving shoulders. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Foundational variation; start with the lowest manageable resistance.

Benefit: Develops triceps brachii strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

085. Overhead triceps extension — Foundational / light resistance

Targets: triceps long head. **Level:** Beginner.

Execution: Keep upper arms near ears; bend elbows behind head and extend without rib flare. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Progressive variation; add resistance only if technique is controlled.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops triceps long head strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

086. Overhead triceps extension — Progressive / loaded or tempo

Targets: triceps long head. **Level:** Intermediate.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Foundational variation; start with the lowest manageable resistance.

Execution: Keep upper arms near ears; bend elbows behind head and extend without rib flare. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops triceps long head strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

087. Skull crusher — Foundational / light resistance

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Progressive variation; add resistance only if technique is controlled.

Targets: triceps brachii. **Level:** Beginner.

Execution: Lower weight toward forehead or behind head with stable upper arms; extend elbows. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops triceps brachii strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Foundational variation; start with the lowest manageable resistance.

088. Skull crusher — Progressive / loaded or tempo

Targets: triceps brachii. **Level:** Intermediate.

Execution: Lower weight toward forehead or behind head with stable upper arms; extend elbows. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops triceps brachii strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Progressive variation; add resistance only if technique is controlled.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

089. Bench dip — Foundational / light resistance

Targets: triceps. **Level:** Beginner.

Execution: Keep shoulders down; lower only to comfortable shoulder depth and press up. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Foundational variation; start with the lowest manageable resistance.

Benefit: Develops triceps strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

090. Bench dip — Progressive / loaded or tempo

Targets: triceps. **Level:** Intermediate.

Execution: Keep shoulders down; lower only to comfortable shoulder depth and press up. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Progressive variation; add resistance only if technique is controlled.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops triceps strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

091. Close-grip bench press — Foundational / light resistance

Targets: triceps, chest. **Level:** Beginner.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Execution: Use shoulder-width grip; lower under control with forearms vertical; press up. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops triceps, chest strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

092. Close-grip bench press — Progressive / loaded or tempo

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Targets: triceps, chest. **Level:** Intermediate.

Execution: Use shoulder-width grip; lower under control with forearms vertical; press up. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops triceps, chest strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Foundational variation; start with the lowest manageable resistance.

093. Kickback — Foundational / light resistance

Targets: triceps brachii. **Level:** Beginner.

Execution: Hinge and hold upper arm parallel to torso; straighten elbow without swinging. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops triceps brachii strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Progressive variation; add resistance only if technique is controlled.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

094. Kickback — Progressive / loaded or tempo

Targets: triceps brachii. **Level:** Intermediate.

Execution: Hinge and hold upper arm parallel to torso; straighten elbow without swinging. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Light dumbbell or resistance band | Training mode: Foundational variation; start with the lowest manageable resistance.

Benefit: Develops triceps brachii strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

095. Cross-body extension — Foundational / light resistance

Targets: triceps. **Level:** Beginner.

Execution: Extend forearm across body against cable while keeping shoulder quiet. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Equipment / modality: Light dumbbell or resistance band | Training mode: Progressive variation; add resistance only if technique is controlled.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops triceps strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

096. Cross-body extension — Progressive / loaded or tempo

Targets: triceps. **Level:** Intermediate.

Equipment / modality: Light dumbbell or resistance band | Training mode: Foundational variation; start with the lowest manageable resistance.

Execution: Extend forearm across body against cable while keeping shoulder quiet. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops triceps strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

097. Diamond push-up — Foundational / light resistance

Equipment / modality: Light dumbbell or resistance band | Training mode: Progressive variation; add resistance only if technique is controlled.

Targets: triceps, chest. **Level:** Beginner.

Execution: Bring hands closer without wrist strain; lower with stable torso and press up. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops triceps, chest strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Light dumbbell | Training mode: Foundational variation; start with the lowest manageable resistance.

098. Diamond push-up — Progressive / loaded or tempo

Targets: triceps, chest. **Level:** Intermediate.

Execution: Bring hands closer without wrist strain; lower with stable torso and press up. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops triceps, chest strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Light dumbbell | Training mode: Progressive variation; add resistance only if technique is controlled.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

099. Isometric triceps extension — Foundational / light resistance

Targets: triceps. **Level:** Beginner.

Execution: Push against immovable surface with elbows partly bent; hold moderate tension while breathing. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Light dumbbell | Training mode: Foundational variation; start with the lowest manageable resistance.

Benefit: Develops triceps strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

100. Isometric triceps extension — Progressive / loaded or tempo

Targets: triceps. **Level:** Intermediate.

Execution: Push against immovable surface with elbows partly bent; hold moderate tension while breathing. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Equipment / modality: Light dumbbell | Training mode: Progressive variation; add resistance only if technique is controlled.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops triceps strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Forearms and grip

101. Wrist curl — Foundational / light resistance

Targets: wrist flexors. **Level:** Beginner.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Foundational variation; start with the lowest manageable resistance.

Execution: Support forearm on bench; curl wrist through comfortable arc; lower slowly. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops wrist flexors strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

102. Wrist curl — Progressive / loaded or tempo

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Progressive variation; add resistance only if technique is controlled.

Targets: wrist flexors. **Level:** Intermediate.

Execution: Support forearm on bench; curl wrist through comfortable arc; lower slowly. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops wrist flexors strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Foundational variation; start with the lowest manageable resistance.

103. Reverse wrist curl — Foundational / light resistance

Targets: wrist extensors. **Level:** Beginner.

Execution: Support forearm palm-down; raise back of hand without moving elbow. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops wrist extensors strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Progressive variation; add resistance only if technique is controlled.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

104. Reverse wrist curl — Progressive / loaded or tempo

Targets: wrist extensors. **Level:** Intermediate.

Execution: Support forearm palm-down; raise back of hand without moving elbow. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Foundational variation; start with the lowest manageable resistance.

Benefit: Develops wrist extensors strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

105. Farmer carry — Foundational / light resistance

Targets: grip, forearm stabilizers. **Level:** Beginner.

Execution: Walk tall holding loads at sides; keep shoulders level and avoid leaning. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Progressive variation; add resistance only if technique is controlled.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops grip, forearm stabilizers strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

106. Farmer carry — Progressive / loaded or tempo

Targets: grip, forearm stabilizers. **Level:** Intermediate.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Execution: Walk tall holding loads at sides; keep shoulders level and avoid leaning. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops grip, forearm stabilizers strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

107. Suitcase carry — Foundational / light resistance

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Targets: grip, lateral core. **Level:** Beginner.

Execution: Carry load in one hand; walk without leaning or rotating. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops grip, lateral core strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

108. Suitcase carry — Progressive / loaded or tempo

Targets: grip, lateral core. **Level:** Intermediate.

Execution: Carry load in one hand; walk without leaning or rotating. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops grip, lateral core strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

109. Dead hang — Foundational / light resistance

Targets: finger flexors, shoulder stabilizers. **Level:** Beginner.

Execution: Hang from stable bar with active shoulders; stop before grip fails. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Benefit: Develops finger flexors, shoulder stabilizers strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

110. Dead hang — Progressive / loaded or tempo

Targets: finger flexors, shoulder stabilizers. **Level:** Intermediate.

Execution: Hang from stable bar with active shoulders; stop before grip fails. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops finger flexors, shoulder stabilizers strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

111. Plate pinch — Foundational / light resistance

Targets: thumb adductors, finger flexors. **Level:** Beginner.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Foundational variation; start with the lowest manageable resistance.

Execution: Pinch smooth plates between fingers and thumb; hold with wrists neutral. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops thumb adductors, finger flexors strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

112. Plate pinch — Progressive / loaded or tempo

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Progressive variation; add resistance only if technique is controlled.

Targets: thumb adductors, finger flexors. **Level:** Intermediate.

Execution: Pinch smooth plates between fingers and thumb; hold with wrists neutral. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops thumb adductors, finger flexors strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Cable/selectorized resistance machine | Training mode: Foundational variation; start with the lowest manageable resistance.

113. Pronation — Foundational / light resistance

Targets: forearm pronators. **Level:** Beginner.

Execution: Support elbow at 90 degrees; rotate palm down against light resistance. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops forearm pronators strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Cable/selectorized resistance machine | Training mode: Progressive variation; add resistance only if technique is controlled.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

114. Pronation — Progressive / loaded or tempo

Targets: forearm pronators. **Level:** Intermediate.

Execution: Support elbow at 90 degrees; rotate palm down against light resistance. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Cable/selectorized resistance machine | Training mode: Foundational variation; start with the lowest manageable resistance.

Benefit: Develops forearm pronators strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

115. Supination — Foundational / light resistance

Targets: forearm supinators. **Level:** Beginner.

Execution: Support elbow; rotate palm upward without turning upper arm. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Equipment / modality: Cable/selectorized resistance machine | Training mode: Progressive variation; add resistance only if technique is controlled.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops forearm supinators strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

116. Supination — Progressive / loaded or tempo

Targets: forearm supinators. **Level:** Intermediate.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Execution: Support elbow; rotate palm upward without turning upper arm. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops forearm supinators strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

117. Radial deviation — Foundational / light resistance

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Targets: radial wrist muscles. **Level:** Beginner.

Execution: Rest forearm and move thumb side of wrist upward through short controlled range. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops radial wrist muscles strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

118. Radial deviation — Progressive / loaded or tempo

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Foundational variation; start with the lowest manageable resistance.

Targets: radial wrist muscles. **Level:** Intermediate.

Execution: Rest forearm and move thumb side of wrist upward through short controlled range. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops radial wrist muscles strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Progressive variation; add resistance only if technique is controlled.

119. Ulnar deviation — Foundational / light resistance

Targets: ulnar wrist muscles. **Level:** Beginner.

Execution: Rest forearm and tilt little-finger side of wrist upward slowly. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops ulnar wrist muscles strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Foundational variation; start with the lowest manageable resistance.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

120. Ulnar deviation — Progressive / loaded or tempo

Targets: ulnar wrist muscles. **Level:** Intermediate.

Execution: Rest forearm and tilt little-finger side of wrist upward slowly. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Progressive variation; add resistance only if technique is controlled.

Benefit: Develops ulnar wrist muscles strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Quadriceps

121. Back squat — Foundational / light resistance

Targets: quadriceps, glutes. **Level:** Beginner.

Equipment / modality: Cable/selectorized resistance machine | Training mode: Foundational variation; start with the lowest manageable resistance.

Execution: Brace torso; sit between hips with knees tracking over toes; drive through midfoot to stand. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops quadriceps, glutes strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

122. Back squat — Progressive / loaded or tempo

Equipment / modality: Cable/selectorized resistance machine | Training mode: Progressive variation; add resistance only if technique is controlled.

Targets: quadriceps, glutes. **Level:** Intermediate.

Execution: Brace torso; sit between hips with knees tracking over toes; drive through midfoot to stand. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops quadriceps, glutes strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Cable/selectorized resistance machine | Training mode: Foundational variation; start with the lowest manageable resistance.

123. Front squat — Foundational / light resistance

Targets: quadriceps, upper back. **Level:** Beginner.

Execution: Hold weight in front rack; keep elbows lifted; squat upright and rise without collapsing. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops quadriceps, upper back strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Cable/selectorized resistance machine | Training mode: Progressive variation; add resistance only if technique is controlled.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

124. Front squat — Progressive / loaded or tempo

Targets: quadriceps, upper back. **Level:** Intermediate.

Execution: Hold weight in front rack; keep elbows lifted; squat upright and rise without collapsing. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Benefit: Develops quadriceps, upper back strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

125. Goblet squat — Foundational / light resistance

Targets: quadriceps, glutes. **Level:** Beginner.

Execution: Hold weight close to chest; squat between knees; keep whole foot planted. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops quadriceps, glutes strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

126. Goblet squat — Progressive / loaded or tempo

Targets: quadriceps, glutes. **Level:** Intermediate.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Execution: Hold weight close to chest; squat between knees; keep whole foot planted. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops quadriceps, glutes strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

127. Split squat — Foundational / light resistance

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Targets: quadriceps, glutes. **Level:** Beginner.

Execution: Take staggered stance; lower rear knee toward floor; push through front foot. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops quadriceps, glutes strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Foundational variation; start with the lowest manageable resistance.

128. Split squat — Progressive / loaded or tempo

Targets: quadriceps, glutes. **Level:** Intermediate.

Execution: Take staggered stance; lower rear knee toward floor; push through front foot. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops quadriceps, glutes strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Progressive variation; add resistance only if technique is controlled.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

129. Reverse lunge — Foundational / light resistance

Targets: quadriceps, glutes. **Level:** Beginner.

Execution: Step backward; lower both knees under control; return by driving through front leg. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Foundational variation; start with the lowest manageable resistance.

Benefit: Develops quadriceps, glutes strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

130. Reverse lunge — Progressive / loaded or tempo

Targets: quadriceps, glutes. **Level:** Intermediate.

Execution: Step backward; lower both knees under control; return by driving through front leg. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Progressive variation; add resistance only if technique is controlled.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops quadriceps, glutes strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

131. Forward lunge — Foundational / light resistance

Targets: quadriceps, glutes. **Level:** Beginner.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Execution: Step forward; decelerate and lower; push back without knee collapsing inward. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops quadriceps, glutes strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

132. Forward lunge — Progressive / loaded or tempo

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Targets: quadriceps, glutes. **Level:** Intermediate.

Execution: Step forward; decelerate and lower; push back without knee collapsing inward. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops quadriceps, glutes strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

133. Step-up — Foundational / light resistance

Targets: quadriceps, glutes. **Level:** Beginner.

Execution: Place whole foot on step; stand using lead leg without pushing hard from trailing foot. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops quadriceps, glutes strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

134. Step-up — Progressive / loaded or tempo

Targets: quadriceps, glutes. **Level:** Intermediate.

Execution: Place whole foot on step; stand using lead leg without pushing hard from trailing foot. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops quadriceps, glutes strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Barbell/dumbbell or hip-thrust machine | Training mode: Foundational variation; start with the lowest manageable resistance.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

135. Leg press — Foundational / light resistance

Targets: quadriceps, glutes. **Level:** Beginner.

Execution: Keep hips and back against pad; lower sled to comfortable depth; press without locking knees. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Barbell/dumbbell or hip-thrust machine | Training mode: Progressive variation; add resistance only if technique is controlled.

Benefit: Develops quadriceps, glutes strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

136. Leg press — Progressive / loaded or tempo

Targets: quadriceps, glutes. **Level:** Intermediate.

Execution: Keep hips and back against pad; lower sled to comfortable depth; press without locking knees. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops quadriceps, glutes strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

137. Leg extension — Foundational / light resistance

Targets: quadriceps. **Level:** Beginner.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Execution: Align knee with machine pivot; extend knee smoothly and lower under control. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops quadriceps strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

138. Leg extension — Progressive / loaded or tempo

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Targets: quadriceps. **Level:** Intermediate.

Execution: Align knee with machine pivot; extend knee smoothly and lower under control. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops quadriceps strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

139. Wall sit — Foundational / light resistance

Targets: quadriceps. **Level:** Beginner.

Execution: Slide down wall to tolerable knee angle; hold while breathing without pushing through pain. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops quadriceps strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Cable/selectorized resistance machine | Training mode: Foundational variation; start with the lowest manageable resistance.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

140. Wall sit — Progressive / loaded or tempo

Targets: quadriceps. **Level:** Intermediate.

Execution: Slide down wall to tolerable knee angle; hold while breathing without pushing through pain. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Cable/selectorized resistance machine | Training mode: Progressive variation; add resistance only if technique is controlled.

Benefit: Develops quadriceps strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Hamstrings

141. Romanian deadlift — Foundational / light resistance

Targets: hamstrings, glutes. **Level:** Beginner.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Execution: Soften knees; hinge hips back with weights near legs; stand by extending hips. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops hamstrings, glutes strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

142. Romanian deadlift — Progressive / loaded or tempo

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Targets: hamstrings, glutes. **Level:** Intermediate.

Execution: Soften knees; hinge hips back with weights near legs; stand by extending hips. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops hamstrings, glutes strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

143. Stiff-leg deadlift — Foundational / light resistance

Targets: hamstrings. **Level:** Beginner.

Execution: Maintain slight knee bend; hinge within hamstring mobility without rounding back. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops hamstrings strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

144. Stiff-leg deadlift — Progressive / loaded or tempo

Targets: hamstrings. **Level:** Intermediate.

Execution: Maintain slight knee bend; hinge within hamstring mobility without rounding back. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Resistance band (manual resistance equipment) | Training mode: Foundational variation; start with the lowest manageable resistance.

Benefit: Develops hamstrings strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

145. Seated leg curl — Foundational / light resistance

Targets: hamstrings. **Level:** Beginner.

Execution: Align machine pivot with knee; curl pad toward seat and return slowly. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Equipment / modality: Resistance band (manual resistance equipment) | Training mode: Progressive variation; add resistance only if technique is controlled.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops hamstrings strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

146. Seated leg curl — Progressive / loaded or tempo

Targets: hamstrings. **Level:** Intermediate.

Equipment / modality: Resistance band (manual resistance equipment) | Training mode: Foundational variation; start with the lowest manageable resistance.

Execution: Align machine pivot with knee; curl pad toward seat and return slowly. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops hamstrings strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

147. Lying leg curl — Foundational / light resistance

Equipment / modality: Resistance band (manual resistance equipment) | Training mode: Progressive variation; add resistance only if technique is controlled.

Targets: hamstrings. **Level:** Beginner.

Execution: Keep pelvis pressed into pad; bend knees without arching lower back. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops hamstrings strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

148. Lying leg curl — Progressive / loaded or tempo

Targets: hamstrings. **Level:** Intermediate.

Execution: Keep pelvis pressed into pad; bend knees without arching lower back. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops hamstrings strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

149. Nordic curl — Foundational / light resistance

Targets: hamstrings. **Level:** Beginner.

Execution: Anchor ankles; keep hips extended; lower torso slowly using hands to catch if needed. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Bodyweight or resistance band | Training mode: Foundational variation; start with the lowest manageable resistance.

Benefit: Develops hamstrings strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

150. Nordic curl — Progressive / loaded or tempo

Targets: hamstrings. **Level:** Intermediate.

Execution: Anchor ankles; keep hips extended; lower torso slowly using hands to catch if needed. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Equipment / modality: Bodyweight or resistance band | Training mode: Progressive variation; add resistance only if technique is controlled.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops hamstrings strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

151. Sliding leg curl — Foundational / light resistance

Targets: hamstrings, glutes. **Level:** Beginner.

Execution: Bridge hips up on sliders; pull heels toward hips then extend legs slowly. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Equipment / modality: Bodyweight, dumbbells, or calf-raise machine | Training mode: Foundational variation; start with the lowest manageable resistance.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops hamstrings, glutes strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

152. Sliding leg curl — Progressive / loaded or tempo

Targets: hamstrings, glutes. **Level:** Intermediate.

Equipment / modality: Bodyweight, dumbbells, or calf-raise machine | Training mode: Progressive variation; add resistance only if technique is controlled.

Execution: Bridge hips up on sliders; pull heels toward hips then extend legs slowly. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops hamstrings, glutes strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

153. Single-leg RDL — Foundational / light resistance

Equipment / modality: Seated calf-raise machine or dumbbell on knees | Training mode: Foundational variation; start with the lowest manageable resistance.

Targets: hamstrings, glutes. **Level:** Beginner.

Execution: Balance on one leg; hinge while rear leg reaches back; keep hips level. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops hamstrings, glutes strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Seated calf-raise machine or dumbbell on knees | Training mode: Progressive variation; add resistance only if technique is controlled.

154. Single-leg RDL — Progressive / loaded or tempo

Targets: hamstrings, glutes. **Level:** Intermediate.

Execution: Balance on one leg; hinge while rear leg reaches back; keep hips level. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops hamstrings, glutes strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

155. Good morning — Foundational / light resistance

Targets: hamstrings, spinal extensors. **Level:** Beginner.

Execution: With light load, hinge at hips and keep spine neutral; return by driving hips forward. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Benefit: Develops hamstrings, spinal extensors strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

156. Good morning — Progressive / loaded or tempo

Targets: hamstrings, spinal extensors. **Level:** Intermediate.

Execution: With light load, hinge at hips and keep spine neutral; return by driving hips forward. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Equipment / modality: Bodyweight or donkey-calf machine | Training mode: Foundational variation; start with the lowest manageable resistance.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops hamstrings, spinal extensors strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

157. Hip hinge drill — Foundational / light resistance

Targets: hamstrings, glutes. **Level:** Beginner.

Equipment / modality: Bodyweight or donkey-calf machine | Training mode: Progressive variation; add resistance only if technique is controlled.

Execution: Hold dowel along head, upper back and sacrum; hinge without losing contact. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops hamstrings, glutes strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

158. Hip hinge drill — Progressive / loaded or tempo

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Targets: hamstrings, glutes. **Level:** Intermediate.

Execution: Hold dowel along head, upper back and sacrum; hinge without losing contact. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops hamstrings, glutes strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

159. Hamstring bridge walkout — Foundational / light resistance

Targets: hamstrings. **Level:** Beginner.

Execution: Bridge hips up; walk heels away in small steps while keeping pelvis controlled. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops hamstrings strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

160. Hamstring bridge walkout — Progressive / loaded or tempo

Targets: hamstrings. **Level:** Intermediate.

Execution: Bridge hips up; walk heels away in small steps while keeping pelvis controlled. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Benefit: Develops hamstrings strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Glutes

161. Hip thrust — Foundational / light resistance

Targets: gluteus maximus. **Level:** Beginner.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Execution: Support upper back on bench; tuck ribs; drive hips up until torso aligns with thighs. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops gluteus maximus strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

162. Hip thrust — Progressive / loaded or tempo

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Targets: gluteus maximus. **Level:** Intermediate.

Execution: Support upper back on bench; tuck ribs; drive hips up until torso aligns with thighs. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops gluteus maximus strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Resistance band | Training mode: Foundational variation; start with the lowest manageable resistance.

163. Glute bridge — Foundational / light resistance

Targets: gluteus maximus. **Level:** Beginner.

Execution: Lie supine with knees bent; push through heels and lift hips without lumbar arch. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops gluteus maximus strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Resistance band | Training mode: Progressive variation; add resistance only if technique is controlled.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

164. Glute bridge — Progressive / loaded or tempo

Targets: gluteus maximus. **Level:** Intermediate.

Execution: Lie supine with knees bent; push through heels and lift hips without lumbar arch. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Resistance band | Training mode: Foundational variation; start with the lowest manageable resistance.

Benefit: Develops gluteus maximus strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

165. Single-leg bridge — Foundational / light resistance

Targets: glutes, posterior chain. **Level:** Beginner.

Execution: Keep pelvis level; extend one hip while opposite leg stays lifted. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Equipment / modality: Resistance band | Training mode: Progressive variation; add resistance only if technique is controlled.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops glutes, posterior chain strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

166. Single-leg bridge — Progressive / loaded or tempo

Targets: glutes, posterior chain. **Level:** Intermediate.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Execution: Keep pelvis level; extend one hip while opposite leg stays lifted. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops glutes, posterior chain strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

167. Cable kickback — Foundational / light resistance

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Targets: gluteus maximus. **Level:** Beginner.

Execution: Brace torso; extend leg backward from hip without swinging or arching. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops gluteus maximus strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

168. Cable kickback — Progressive / loaded or tempo

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Targets: gluteus maximus. **Level:** Intermediate.

Execution: Brace torso; extend leg backward from hip without swinging or arching. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops gluteus maximus strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

169. Quadruped hip extension — Foundational / light resistance

Targets: gluteus maximus. **Level:** Beginner.

Execution: On hands and knees, drive heel upward while keeping lower back still. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops gluteus maximus strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

170. Quadruped hip extension — Progressive / loaded or tempo

Targets: gluteus maximus. **Level:** Intermediate.

Execution: On hands and knees, drive heel upward while keeping lower back still. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Benefit: Develops gluteus maximus strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

171. Clamshell — Foundational / light resistance

Targets: gluteus medius. **Level:** Beginner.

Execution: Lie on side with knees bent; rotate top knee upward without rolling pelvis. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops gluteus medius strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

172. Clamshell — Progressive / loaded or tempo

Targets: gluteus medius. **Level:** Intermediate.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Execution: Lie on side with knees bent; rotate top knee upward without rolling pelvis. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops gluteus medius strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

173. Lateral band walk — Foundational / light resistance

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Targets: gluteus medius. **Level:** Beginner.

Execution: Hold slight squat; step sideways against band while keeping knees aligned. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops gluteus medius strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

174. Lateral band walk — Progressive / loaded or tempo

Targets: gluteus medius. **Level:** Intermediate.

Execution: Hold slight squat; step sideways against band while keeping knees aligned. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops gluteus medius strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

175. Monster walk — Foundational / light resistance

Targets: gluteus medius, maximus. **Level:** Beginner.

Execution: With band tension, step diagonally forward/backward maintaining stable hips. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Benefit: Develops gluteus medius, maximus strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

176. Monster walk — Progressive / loaded or tempo

Targets: gluteus medius, maximus. **Level:** Intermediate.

Execution: With band tension, step diagonally forward/backward maintaining stable hips. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Equipment / modality: Ab wheel (manual resistance equipment) | Training mode: Foundational variation; start with the lowest manageable resistance.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops gluteus medius, maximus strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

177. Frog pump — Foundational / light resistance

Targets: gluteus maximus. **Level:** Beginner.

Equipment / modality: Ab wheel (manual resistance equipment) | Training mode: Progressive variation; add resistance only if technique is controlled.

Execution: Place soles together and knees out; lift hips by squeezing glutes, not arching back. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops gluteus maximus strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

178. Frog pump — Progressive / loaded or tempo

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Targets: gluteus maximus. **Level:** Intermediate.

Execution: Place soles together and knees out; lift hips by squeezing glutes, not arching back. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops gluteus maximus strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

179. Standing hip abduction — Foundational / light resistance

Targets: gluteus medius. **Level:** Beginner.

Execution: Stand tall; move leg sideways without leaning torso or rotating toes outward. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops gluteus medius strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

180. Standing hip abduction — Progressive / loaded or tempo

Targets: gluteus medius. **Level:** Intermediate.

Execution: Stand tall; move leg sideways without leaning torso or rotating toes outward. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Benefit: Develops gluteus medius strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Calves, ankles and feet

181. Standing calf raise — Foundational / light resistance

Targets: gastrocnemius. **Level:** Beginner.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Execution: Rise onto balls of feet with straight knees; pause and lower heels slowly. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops gastrocnemius strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

182. Standing calf raise — Progressive / loaded or tempo

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Targets: gastrocnemius. **Level:** Intermediate.

Execution: Rise onto balls of feet with straight knees; pause and lower heels slowly. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops gastrocnemius strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Cable/selectorized resistance machine | Training mode: Foundational variation; start with the lowest manageable resistance.

183. Seated calf raise — Foundational / light resistance

Targets: soleus. **Level:** Beginner.

Execution: With knees bent, lift heels fully and lower through comfortable range. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops soleus strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Cable/selectorized resistance machine | Training mode: Progressive variation; add resistance only if technique is controlled.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

184. Seated calf raise — Progressive / loaded or tempo

Targets: soleus. **Level:** Intermediate.

Execution: With knees bent, lift heels fully and lower through comfortable range. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops soleus strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

185. Single-leg calf raise — Foundational / light resistance

Targets: gastrocnemius, soleus. **Level:** Beginner.

Execution: Balance on one foot; rise vertically without ankle rolling outward. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Benefit: Develops gastrocnemius, soleus strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

186. Single-leg calf raise — Progressive / loaded or tempo

Targets: gastrocnemius, soleus. **Level:** Intermediate.

Execution: Balance on one foot; rise vertically without ankle rolling outward. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Equipment / modality: Cable/selectorized resistance machine | Training mode: Foundational variation; start with the lowest manageable resistance.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops gastrocnemius, soleus strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

187. Donkey calf raise — Foundational / light resistance

Targets: gastrocnemius. **Level:** Beginner.

Equipment / modality: Cable/selectorized resistance machine | Training mode: Progressive variation; add resistance only if technique is controlled.

Execution: Hinge at hips with support; raise heels while knees remain nearly straight. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops gastrocnemius strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

188. Donkey calf raise — Progressive / loaded or tempo

Equipment / modality: Cable/selectorized resistance machine | Training mode: Foundational variation; start with the lowest manageable resistance.

Targets: gastrocnemius. **Level:** Intermediate.

Execution: Hinge at hips with support; raise heels while knees remain nearly straight. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops gastrocnemius strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Cable/selectorized resistance machine | Training mode: Progressive variation; add resistance only if technique is controlled.

189. Tibialis raise — Foundational / light resistance

Targets: tibialis anterior. **Level:** Beginner.

Execution: Lean against wall; keep heels grounded and lift toes toward shins. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops tibialis anterior strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Cable/selectorized resistance machine | Training mode: Foundational variation; start with the lowest manageable resistance.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

190. Tibialis raise — Progressive / loaded or tempo

Targets: tibialis anterior. **Level:** Intermediate.

Execution: Lean against wall; keep heels grounded and lift toes toward shins. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Cable/selectorized resistance machine | Training mode: Progressive variation; add resistance only if technique is controlled.

Benefit: Develops tibialis anterior strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

191. Heel walk — Foundational / light resistance

Targets: ankle dorsiflexors. **Level:** Beginner.

Execution: Walk short distance on heels with toes elevated and posture tall. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops ankle dorsiflexors strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

192. Heel walk — Progressive / loaded or tempo

Targets: ankle dorsiflexors. **Level:** Intermediate.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Execution: Walk short distance on heels with toes elevated and posture tall. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops ankle dorsiflexors strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

193. Toe walk — Foundational / light resistance

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Targets: plantar flexors. **Level:** Beginner.

Execution: Walk on balls of feet with ankles aligned and short controlled steps. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops plantar flexors strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

194. Toe walk — Progressive / loaded or tempo

Targets: plantar flexors. **Level:** Intermediate.

Execution: Walk on balls of feet with ankles aligned and short controlled steps. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops plantar flexors strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Foundational variation; start with the lowest manageable resistance.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

195. Ankle inversion — Foundational / light resistance

Targets: tibialis posterior. **Level:** Beginner.

Execution: With band, turn sole inward slowly while keeping knee still. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Progressive variation; add resistance only if technique is controlled.

Benefit: Develops tibialis posterior strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

196. Ankle inversion — Progressive / loaded or tempo

Targets: tibialis posterior. **Level:** Intermediate.

Execution: With band, turn sole inward slowly while keeping knee still. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Foundational variation; start with the lowest manageable resistance.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops tibialis posterior strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

197. Ankle eversion — Foundational / light resistance

Targets: peroneal muscles. **Level:** Beginner.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Progressive variation; add resistance only if technique is controlled.

Execution: With band, turn sole outward against resistance without rotating leg. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops peroneal muscles strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

198. Ankle eversion — Progressive / loaded or tempo

Equipment / modality: Resistance band or cable machine | Training mode: Foundational variation; start with the lowest manageable resistance.

Targets: peroneal muscles. **Level:** Intermediate.

Execution: With band, turn sole outward against resistance without rotating leg. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops peroneal muscles strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Resistance band or cable machine | Training mode: Progressive variation; add resistance only if technique is controlled.

199. Short-foot exercise — Foundational / light resistance

Targets: intrinsic foot muscles. **Level:** Beginner.

Execution: Draw ball of foot toward heel to raise arch without curling toes. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops intrinsic foot muscles strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Foundational variation; start with the lowest manageable resistance.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

200. Short-foot exercise — Progressive / loaded or tempo

Targets: intrinsic foot muscles. **Level:** Intermediate.

Execution: Draw ball of foot toward heel to raise arch without curling toes. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Progressive variation; add resistance only if technique is controlled.

Benefit: Develops intrinsic foot muscles strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Abdominals and anterior core

201. Front plank — Foundational / light resistance

Targets: rectus abdominis, transverse abdominis. **Level:** Beginner.

Execution: Stack elbows under shoulders; brace abdomen and glutes; keep head-to-heel line. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Equipment / modality: Bodyweight on Roman chair or back-extension bench | Training mode: Foundational variation; start with the lowest manageable resistance.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops rectus abdominis, transverse abdominis strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

202. Front plank — Progressive / loaded or tempo

Targets: rectus abdominis, transverse abdominis. **Level:** Intermediate.

Equipment / modality: Bodyweight on Roman chair or back-extension bench | Training mode: Progressive variation; add resistance only if technique is controlled.

Execution: Stack elbows under shoulders; brace abdomen and glutes; keep head-to-heel line. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops rectus abdominis, transverse abdominis strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

203. Dead bug — Foundational / light resistance

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Targets: deep abdominal stabilizers. **Level:** Beginner.

Execution: Lie supine; keep ribs down while extending opposite arm and leg without back arch. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops deep abdominal stabilizers strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

204. Dead bug — Progressive / loaded or tempo

Targets: deep abdominal stabilizers. **Level:** Intermediate.

Execution: Lie supine; keep ribs down while extending opposite arm and leg without back arch. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops deep abdominal stabilizers strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

205. Crunch — Foundational / light resistance

Targets: rectus abdominis. **Level:** Beginner.

Execution: Curl upper back off floor with ribs moving toward pelvis; avoid pulling neck. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Benefit: Develops rectus abdominis strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

206. Crunch — Progressive / loaded or tempo

Targets: rectus abdominis. **Level:** Intermediate.

Execution: Curl upper back off floor with ribs moving toward pelvis; avoid pulling neck. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops rectus abdominis strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

207. Reverse crunch — Foundational / light resistance

Targets: lower rectus abdominis. **Level:** Beginner.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Execution: Curl pelvis toward ribs using abs; avoid swinging legs. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops lower rectus abdominis strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

208. Reverse crunch — Progressive / loaded or tempo

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Targets: lower rectus abdominis. **Level:** Intermediate.

Execution: Curl pelvis toward ribs using abs; avoid swinging legs. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops lower rectus abdominis strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

209. Hollow hold — Foundational / light resistance

Targets: rectus abdominis. **Level:** Beginner.

Execution: Flatten lower ribs toward pelvis; hold arms and legs extended only as low as control allows. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops rectus abdominis strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

210. Hollow hold — Progressive / loaded or tempo

Targets: rectus abdominis. **Level:** Intermediate.

Execution: Flatten lower ribs toward pelvis; hold arms and legs extended only as low as control allows. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Benefit: Develops rectus abdominis strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

211. Ab wheel rollout — Foundational / light resistance

Targets: anterior core. **Level:** Beginner.

Execution: Kneel and brace; roll forward within ability to resist back extension; pull back. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Equipment / modality: Reverse-hyper machine or bodyweight bench variation | Training mode: Foundational variation; start with the lowest manageable resistance.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops anterior core strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

212. Ab wheel rollout — Progressive / loaded or tempo

Targets: anterior core. **Level:** Intermediate.

Equipment / modality: Reverse-hyper machine or bodyweight bench variation | Training mode: Progressive variation; add resistance only if technique is controlled.

Execution: Kneel and brace; roll forward within ability to resist back extension; pull back. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops anterior core strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

213. Mountain climber — Foundational / light resistance

Equipment / modality: Bodyweight on Roman chair | Training mode: Foundational variation; start with the lowest manageable resistance.

Targets: core, hip flexors. **Level:** Beginner.

Execution: Hold plank and alternate knees toward chest without bouncing hips. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops core, hip flexors strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Bodyweight on Roman chair | Training mode: Progressive variation; add resistance only if technique is controlled.

214. Mountain climber — Progressive / loaded or tempo

Targets: core, hip flexors. **Level:** Intermediate.

Execution: Hold plank and alternate knees toward chest without bouncing hips. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops core, hip flexors strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Bodyweight or light barbell | Training mode: Foundational variation; start with the lowest manageable resistance.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

215. Bear hold — Foundational / light resistance

Targets: core, shoulder stabilizers. **Level:** Beginner.

Execution: On all fours, lift knees a few centimeters; maintain neutral back and breathe. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Bodyweight or light barbell | Training mode: Progressive variation; add resistance only if technique is controlled.

Benefit: Develops core, shoulder stabilizers strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

216. Bear hold — Progressive / loaded or tempo

Targets: core, shoulder stabilizers. **Level:** Intermediate.

Execution: On all fours, lift knees a few centimeters; maintain neutral back and breathe. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops core, shoulder stabilizers strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

217. V-up — Foundational / light resistance

Targets: rectus abdominis, hip flexors. **Level:** Beginner.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Execution: Raise legs and trunk together under control; avoid jerking lower back. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops rectus abdominis, hip flexors strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

218. V-up — Progressive / loaded or tempo

Targets: rectus abdominis, hip flexors. **Level:** Intermediate.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Execution: Raise legs and trunk together under control; avoid jerking lower back. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops rectus abdominis, hip flexors strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

219. Cable crunch — Foundational / light resistance

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Targets: rectus abdominis. **Level:** Beginner.

Execution: Kneel and flex spine by bringing ribs toward pelvis, keeping hips relatively still. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops rectus abdominis strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

220. Cable crunch — Progressive / loaded or tempo

Targets: rectus abdominis. **Level:** Intermediate.

Execution: Kneel and flex spine by bringing ribs toward pelvis, keeping hips relatively still. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops rectus abdominis strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Obliques and rotational core

221. Side plank — Foundational / light resistance

Targets: obliques, quadratus lumborum. **Level:** Beginner.

Execution: Stack elbow below shoulder; lift hips and maintain straight body line. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Equipment / modality: Cable/selectorized resistance machine | Training mode: Foundational variation; start with the lowest manageable resistance.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops obliques, quadratus lumborum strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

222. Side plank — Progressive / loaded or tempo

Targets: obliques, quadratus lumborum. **Level:** Intermediate.

Equipment / modality: Cable/selectorized resistance machine | Training mode: Progressive variation; add resistance only if technique is controlled.

Execution: Stack elbow below shoulder; lift hips and maintain straight body line. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops obliques, quadratus lumborum strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

223. Pallof press — Foundational / light resistance

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Targets: obliques, transverse abdominis. **Level:** Beginner.

Execution: Stand side-on to cable; press hands forward without allowing torso to rotate. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops obliques, transverse abdominis strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

224. Pallof press — Progressive / loaded or tempo

Targets: obliques, transverse abdominis. **Level:** Intermediate.

Execution: Stand side-on to cable; press hands forward without allowing torso to rotate. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops obliques, transverse abdominis strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

225. Cable wood chop — Foundational / light resistance

Targets: obliques, hips. **Level:** Beginner.

Execution: Rotate through trunk and hips together across body with controlled cable path. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Benefit: Develops obliques, hips strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

226. Cable wood chop — Progressive / loaded or tempo

Targets: obliques, hips. **Level:** Intermediate.

Execution: Rotate through trunk and hips together across body with controlled cable path. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Equipment / modality: Bodyweight or resistance band | Training mode: Foundational variation; start with the lowest manageable resistance.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops obliques, hips strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

227. Cable lift — Foundational / light resistance

Targets: obliques, hips. **Level:** Beginner.

Equipment / modality: Bodyweight or resistance band | Training mode: Progressive variation; add resistance only if technique is controlled.

Execution: Pull handle diagonally low-to-high while turning feet and hips smoothly. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops obliques, hips strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

228. Cable lift — Progressive / loaded or tempo

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Targets: obliques, hips. **Level:** Intermediate.

Execution: Pull handle diagonally low-to-high while turning feet and hips smoothly. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops obliques, hips strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

229. Bird dog — Foundational / light resistance

Targets: multifidus, obliques. **Level:** Beginner.

Execution: On all fours, reach opposite arm and leg while resisting trunk rotation. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops multifidus, obliques strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

230. Bird dog — Progressive / loaded or tempo

Targets: multifidus, obliques. **Level:** Intermediate.

Execution: On all fours, reach opposite arm and leg while resisting trunk rotation. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Benefit: Develops multifidus, obliques strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

231. Russian twist — Foundational / light resistance

Targets: obliques. **Level:** Beginner.

Execution: Sit tall with bent knees; rotate torso slowly side to side without yanking spine. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Equipment / modality: Bodyweight | Training mode: Foundational variation; start with the lowest manageable resistance.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops obliques strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

232. Russian twist — Progressive / loaded or tempo

Targets: obliques. **Level:** Intermediate.

Equipment / modality: Bodyweight | Training mode: Progressive variation; add resistance only if technique is controlled.

Execution: Sit tall with bent knees; rotate torso slowly side to side without yanking spine. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops obliques strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

233. Suitcase march — Foundational / light resistance

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Targets: obliques, lateral core. **Level:** Beginner.

Execution: Hold one weight at side; march slowly without tilting pelvis. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops obliques, lateral core strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

234. Suitcase march — Progressive / loaded or tempo

Targets: obliques, lateral core. **Level:** Intermediate.

Execution: Hold one weight at side; march slowly without tilting pelvis. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops obliques, lateral core strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

235. Side bend — Foundational / light resistance

Targets: quadratus lumborum, obliques. **Level:** Beginner.

Execution: Move trunk sideways through modest range; avoid forward rotation. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops quadratus lumborum, obliques strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

236. Side bend — Progressive / loaded or tempo

Targets: quadratus lumborum, obliques. **Level:** Intermediate.

Execution: Move trunk sideways through modest range; avoid forward rotation. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Benefit: Develops quadratus lumborum, obliques strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

237. Half-kneeling anti-rotation hold — Foundational / light resistance

Targets: obliques. **Level:** Beginner.

Execution: Kneel side-on to band; hold arms extended while resisting rotation. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops obliques strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

238. Half-kneeling anti-rotation hold — Progressive / loaded or tempo

Targets: obliques. **Level:** Intermediate.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Execution: Kneel side-on to band; hold arms extended while resisting rotation. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops obliques strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

239. Rotational medicine-ball throw — Foundational / light resistance

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Targets: obliques, hips. **Level:** Beginner.

Execution: Rotate from feet and hips; throw ball toward safe wall with braced trunk. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops obliques, hips strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

240. Rotational medicine-ball throw — Progressive / loaded or tempo

Targets: obliques, hips. **Level:** Intermediate.

Execution: Rotate from feet and hips; throw ball toward safe wall with braced trunk. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops obliques, hips strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Lower back and spinal stability

241. Back extension — Foundational / light resistance

Targets: erector spinae, glutes. **Level:** Beginner.

Execution: Hinge over pad with neutral spine; extend hips to body alignment without hyperextending. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops erector spinae, glutes strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

242. Back extension — Progressive / loaded or tempo

Targets: erector spinae, glutes. **Level:** Intermediate.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Execution: Hinge over pad with neutral spine; extend hips to body alignment without hyperextending. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops erector spinae, glutes strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

243. Superman lift — Foundational / light resistance

Equipment / modality: Resistance band (manual resistance equipment) | Training mode: Foundational variation; start with the lowest manageable resistance.

Targets: spinal extensors. **Level:** Beginner.

Execution: Lie prone; lift arms and legs slightly without cranking neck or lower back. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops spinal extensors strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Resistance band (manual resistance equipment) | Training mode: Progressive variation; add resistance only if technique is controlled.

244. Superman lift — Progressive / loaded or tempo

Targets: spinal extensors. **Level:** Intermediate.

Execution: Lie prone; lift arms and legs slightly without cranking neck or lower back. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops spinal extensors strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Foam roller (no external weight) | Training mode: Foundational variation; start with the lowest manageable resistance.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

245. Prone cobra — Foundational / light resistance

Targets: thoracic extensors. **Level:** Beginner.

Execution: Lie face down; lift chest slightly and draw shoulder blades down and back. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Foam roller (no external weight) | Training mode: Progressive variation; add resistance only if technique is controlled.

Benefit: Develops thoracic extensors strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

246. Prone cobra — Progressive / loaded or tempo

Targets: thoracic extensors. **Level:** Intermediate.

Execution: Lie face down; lift chest slightly and draw shoulder blades down and back. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops thoracic extensors strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

247. McGill curl-up — Foundational / light resistance

Targets: anterior core. **Level:** Beginner.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Execution: One knee bent; brace and lift head/shoulders minimally without rounding lower back. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops anterior core strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

248. McGill curl-up — Progressive / loaded or tempo

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Targets: anterior core. **Level:** Intermediate.

Execution: One knee bent; brace and lift head/shoulders minimally without rounding lower back. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops anterior core strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

249. Hip hinge isometric — Foundational / light resistance

Targets: spinal stabilizers. **Level:** Beginner.

Execution: Hold light hip-hinge position with spine neutral and steady breathing. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops spinal stabilizers strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

250. Hip hinge isometric — Progressive / loaded or tempo

Targets: spinal stabilizers. **Level:** Intermediate.

Execution: Hold light hip-hinge position with spine neutral and steady breathing. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Benefit: Develops spinal stabilizers strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

251. Quadruped rocking — Foundational / light resistance

Targets: lumbar stability, hips. **Level:** Beginner.

Execution: From hands and knees, rock hips toward heels without lumbar rounding. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Benefit: Develops lumbar stability, hips strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

252. Quadruped rocking — Progressive / loaded or tempo

Targets: lumbar stability, hips. **Level:** Intermediate.

Execution: From hands and knees, rock hips toward heels without lumbar rounding. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops lumbar stability, hips strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

253. Reverse hyperextension — Foundational / light resistance

Targets: glutes, lumbar stabilizers. **Level:** Beginner.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Execution: Support torso on bench; lift legs to body alignment without swinging. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops glutes, lumbar stabilizers strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

254. Reverse hyperextension — Progressive / loaded or tempo

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Targets: glutes, lumbar stabilizers. **Level:** Intermediate.

Execution: Support torso on bench; lift legs to body alignment without swinging. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops glutes, lumbar stabilizers strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

255. Roman chair hold — Foundational / light resistance

Targets: spinal extensors. **Level:** Beginner.

Execution: Hold torso in line with legs on extension bench; avoid overextension. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops spinal extensors strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

256. Roman chair hold — Progressive / loaded or tempo

Targets: spinal extensors. **Level:** Intermediate.

Execution: Hold torso in line with legs on extension bench; avoid overextension. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Foundational variation; start with the lowest manageable resistance.

Benefit: Develops spinal extensors strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

257. Good morning hold — Foundational / light resistance

Targets: posterior chain. **Level:** Beginner.

Execution: Hinge with very light load; pause briefly maintaining a neutral spine. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Progressive variation; add resistance only if technique is controlled.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops posterior chain strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

258. Good morning hold — Progressive / loaded or tempo

Targets: posterior chain. **Level:** Intermediate.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Foundational variation; start with the lowest manageable resistance.

Execution: Hinge with very light load; pause briefly maintaining a neutral spine. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops posterior chain strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

259. Segmental cat-cow — Foundational / light resistance

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Progressive variation; add resistance only if technique is controlled.

Targets: spinal mobility. **Level:** Beginner.

Execution: On all fours, gently alternate spinal flexion and extension through pain-free range. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops spinal mobility strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Sled (manual resistance equipment) | Training mode: Foundational variation; start with the lowest manageable resistance.

260. Segmental cat-cow — Progressive / loaded or tempo

Targets: spinal mobility. **Level:** Intermediate.

Execution: On all fours, gently alternate spinal flexion and extension through pain-free range. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops spinal mobility strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Sled (manual resistance equipment) | Training mode: Progressive variation; add resistance only if technique is controlled.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Hips, adductors and mobility

261. Copenhagen plank — Foundational / light resistance

Targets: hip adductors, obliques. **Level:** Beginner.

Execution: Support top leg on bench; lift pelvis and hold without dropping hips. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Equipment / modality: Sled (manual resistance equipment) | Training mode: Foundational variation; start with the lowest manageable resistance.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops hip adductors, obliques strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

262. Copenhagen plank — Progressive / loaded or tempo

Targets: hip adductors, obliques. **Level:** Intermediate.

Equipment / modality: Sled (manual resistance equipment) | Training mode: Progressive variation; add resistance only if technique is controlled.

Execution: Support top leg on bench; lift pelvis and hold without dropping hips. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops hip adductors, obliques strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

263. Side-lying adduction — Foundational / light resistance

Equipment / modality: Battle ropes (manual resistance equipment) | Training mode: Foundational variation; start with the lowest manageable resistance.

Targets: hip adductors. **Level:** Beginner.

Execution: Lie on side; lift bottom leg toward ceiling without rolling pelvis. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops hip adductors strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Equipment / modality: Battle ropes (manual resistance equipment) | Training mode: Progressive variation; add resistance only if technique is controlled.

264. Side-lying adduction — Progressive / loaded or tempo

Targets: hip adductors. **Level:** Intermediate.

Execution: Lie on side; lift bottom leg toward ceiling without rolling pelvis. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops hip adductors strength, control or endurance; supports functional movement when combined with balanced programming.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Foundational variation; start with the lowest manageable resistance.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

265. Standing adduction — Foundational / light resistance

Targets: hip adductors. **Level:** Beginner.

Execution: Pull leg inward against band while keeping trunk upright. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Equipment / modality: Bodyweight / no external weight (optional assisted or loaded progression) | Training mode: Progressive variation; add resistance only if technique is controlled.

Benefit: Develops hip adductors strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

266. Standing adduction — Progressive / loaded or tempo

Targets: hip adductors. **Level:** Intermediate.

Execution: Pull leg inward against band while keeping trunk upright. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Foundational variation; start with the lowest manageable resistance.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops hip adductors strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

267. Cossack squat — Foundational / light resistance

Targets: adductors, quads. **Level:** Beginner.

Equipment / modality: Free weights (dumbbells, barbell, kettlebell or medicine ball as appropriate) | Training mode: Progressive variation; add resistance only if technique is controlled.

Execution: Shift to one side into squat while other leg straightens; stay within hip mobility. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops adductors, quads strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

268. Cossack squat — Progressive / loaded or tempo

Targets: adductors, quads. **Level:** Intermediate.

Execution: Shift to one side into squat while other leg straightens; stay within hip mobility. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops adductors, quads strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

269. Lateral lunge — Foundational / light resistance

Targets: adductors, glutes. **Level:** Beginner.

Execution: Step sideways and sit into stepping hip while opposite leg remains longer. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops adductors, glutes strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

270. Lateral lunge — Progressive / loaded or tempo

Targets: adductors, glutes. **Level:** Intermediate.

Execution: Step sideways and sit into stepping hip while opposite leg remains longer. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops adductors, glutes strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

271. Hip flexor march — Foundational / light resistance

Targets: iliopsoas. **Level:** Beginner.

Execution: Lift knee toward waist against band while keeping pelvis level. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops iliopsoas strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

272. Hip flexor march — Progressive / loaded or tempo

Targets: iliopsoas. **Level:** Intermediate.

Execution: Lift knee toward waist against band while keeping pelvis level. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops iliopsoas strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

273. Straight-leg raise — Foundational / light resistance

Targets: hip flexors, quadriceps. **Level:** Beginner.

Execution: Lie supine with one knee bent; raise straight leg without lumbar arch. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops hip flexors, quadriceps strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

274. Straight-leg raise — Progressive / loaded or tempo

Targets: hip flexors, quadriceps. **Level:** Intermediate.

Execution: Lie supine with one knee bent; raise straight leg without lumbar arch. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops hip flexors, quadriceps strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

275. 90/90 hip switch — Foundational / light resistance

Targets: hip rotators. **Level:** Beginner.

Execution: Sit with both knees bent at 90 degrees; rotate knees side to side under control. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops hip rotators strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

276. 90/90 hip switch — Progressive / loaded or tempo

Targets: hip rotators. **Level:** Intermediate.

Execution: Sit with both knees bent at 90 degrees; rotate knees side to side under control. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops hip rotators strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

277. Hip CAR — Foundational / light resistance

Targets: hip capsule and rotators. **Level:** Beginner.

Execution: Move hip through slow controlled circle while keeping torso still. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops hip capsule and rotators strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

278. Hip CAR — Progressive / loaded or tempo

Targets: hip capsule and rotators. **Level:** Intermediate.

Execution: Move hip through slow controlled circle while keeping torso still. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops hip capsule and rotators strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

279. Adductor rock-back — Foundational / light resistance

Targets: adductors. **Level:** Beginner.

Execution: On all fours extend one leg sideways; rock hips back until mild inner-thigh stretch. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops adductors strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

280. Adductor rock-back — Progressive / loaded or tempo

Targets: adductors. **Level:** Intermediate.

Execution: On all fours extend one leg sideways; rock hips back until mild inner-thigh stretch. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops adductors strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Neck, posture and scapula

281. Chin tuck — Foundational / light resistance

Targets: deep neck flexors. **Level:** Beginner.

Execution: Draw chin straight backward without tilting head; hold gently. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops deep neck flexors strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

282. Chin tuck — Progressive / loaded or tempo

Targets: deep neck flexors. **Level:** Intermediate.

Execution: Draw chin straight backward without tilting head; hold gently. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops deep neck flexors strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

283. Neck flexion isometric — Foundational / light resistance

Targets: neck flexors. **Level:** Beginner.

Execution: Press forehead lightly into palm without moving neck; breathe. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops neck flexors strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

284. Neck flexion isometric — Progressive / loaded or tempo

Targets: neck flexors. **Level:** Intermediate.

Execution: Press forehead lightly into palm without moving neck; breathe. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops neck flexors strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

285. Neck extension isometric — Foundational / light resistance

Targets: neck extensors. **Level:** Beginner.

Execution: Press back of head lightly into palm without arching. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops neck extensors strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

286. Neck extension isometric — Progressive / loaded or tempo

Targets: neck extensors. **Level:** Intermediate.

Execution: Press back of head lightly into palm without arching. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops neck extensors strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

287. Neck lateral isometric — Foundational / light resistance

Targets: lateral neck muscles. **Level:** Beginner.

Execution: Press temple gently into hand without bending head. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops lateral neck muscles strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

288. Neck lateral isometric — Progressive / loaded or tempo

Targets: lateral neck muscles. **Level:** Intermediate.

Execution: Press temple gently into hand without bending head. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops lateral neck muscles strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

289. Scapular retraction — Foundational / light resistance

Targets: middle trapezius, rhomboids. **Level:** Beginner.

Execution: Draw shoulder blades gently together and down without rib flare. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops middle trapezius, rhomboids strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

290. Scapular retraction — Progressive / loaded or tempo

Targets: middle trapezius, rhomboids. **Level:** Intermediate.

Execution: Draw shoulder blades gently together and down without rib flare. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops middle trapezius, rhomboids strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

291. Band pull-apart — Foundational / light resistance

Targets: rear deltoids, rhomboids. **Level:** Beginner.

Execution: With straight but soft elbows, pull band apart to chest level. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops rear deltoids, rhomboids strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

292. Band pull-apart — Progressive / loaded or tempo

Targets: rear deltoids, rhomboids. **Level:** Intermediate.

Execution: With straight but soft elbows, pull band apart to chest level. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops rear deltoids, rhomboids strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

293. Thoracic extension over roller — Foundational / light resistance

Targets: thoracic spine mobility. **Level:** Beginner.

Execution: Support head and extend upper back over roller gently without forcing neck. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops thoracic spine mobility strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

294. Thoracic extension over roller — Progressive / loaded or tempo

Targets: thoracic spine mobility. **Level:** Intermediate.

Execution: Support head and extend upper back over roller gently without forcing neck. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops thoracic spine mobility strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

295. Wall angel — Foundational / light resistance

Targets: scapular stabilizers. **Level:** Beginner.

Execution: Stand against wall and slide arms upward within pain-free range. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops scapular stabilizers strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

296. Wall angel — Progressive / loaded or tempo

Targets: scapular stabilizers. **Level:** Intermediate.

Execution: Stand against wall and slide arms upward within pain-free range. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops scapular stabilizers strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

297. Serratus wall push — Foundational / light resistance

Targets: serratus anterior. **Level:** Beginner.

Execution: Hands on wall; reach upper back away from wall without bending elbows. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops serratus anterior strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

298. Serratus wall push — Progressive / loaded or tempo

Targets: serratus anterior. **Level:** Intermediate.

Execution: Hands on wall; reach upper back away from wall without bending elbows. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops serratus anterior strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

299. Levator scapulae stretch — Foundational / light resistance

Targets: neck mobility. **Level:** Beginner.

Execution: Rotate head slightly and nod toward armpit until gentle stretch; do not pull hard. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops neck mobility strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

300. Levator scapulae stretch — Progressive / loaded or tempo

Targets: neck mobility. **Level:** Intermediate.

Execution: Rotate head slightly and nod toward armpit until gentle stretch; do not pull hard. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops neck mobility strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Full body and conditioning

301. Burpee — Foundational / light resistance

Targets: full body, cardiovascular system. **Level:** Beginner.

Execution: Squat and place hands down; step or jump to plank; return to standing with controlled landing. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops full body, cardiovascular system strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

302. Burpee — Progressive / loaded or tempo

Targets: full body, cardiovascular system. **Level:** Intermediate.

Execution: Squat and place hands down; step or jump to plank; return to standing with controlled landing. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops full body, cardiovascular system strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

303. Jumping jack — Foundational / light resistance

Targets: cardiorespiratory system. **Level:** Beginner.

Execution: Jump feet apart as arms rise; land softly with knees aligned. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops cardiorespiratory system strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

304. Jumping jack — Progressive / loaded or tempo

Targets: cardiorespiratory system. **Level:** Intermediate.

Execution: Jump feet apart as arms rise; land softly with knees aligned. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops cardiorespiratory system strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

305. High knees — Foundational / light resistance

Targets: cardiorespiratory system, hip flexors. **Level:** Beginner.

Execution: Run in place lifting knees rhythmically; land quietly and maintain upright trunk. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops cardiorespiratory system, hip flexors strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

306. High knees — Progressive / loaded or tempo

Targets: cardiorespiratory system, hip flexors. **Level:** Intermediate.

Execution: Run in place lifting knees rhythmically; land quietly and maintain upright trunk. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops cardiorespiratory system, hip flexors strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

307. Kettlebell swing — Foundational / light resistance

Targets: glutes, hamstrings, conditioning. **Level:** Beginner.

Execution: Hinge to load hips; snap hips forward to float bell; avoid lifting with arms. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops glutes, hamstrings, conditioning strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

308. Kettlebell swing — Progressive / loaded or tempo

Targets: glutes, hamstrings, conditioning. **Level:** Intermediate.

Execution: Hinge to load hips; snap hips forward to float bell; avoid lifting with arms. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops glutes, hamstrings, conditioning strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

309. Thruster — Foundational / light resistance

Targets: quads, shoulders, conditioning. **Level:** Beginner.

Execution: Squat with weight at shoulders; stand powerfully and press overhead in one motion. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops quads, shoulders, conditioning strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

310. Thruster — Progressive / loaded or tempo

Targets: quads, shoulders, conditioning. **Level:** Intermediate.

Execution: Squat with weight at shoulders; stand powerfully and press overhead in one motion. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops quads, shoulders, conditioning strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

311. Sled push — Foundational / light resistance

Targets: quads, glutes, conditioning. **Level:** Beginner.

Execution: Lean forward in straight line; drive through feet with short strong steps. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops quads, glutes, conditioning strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

312. Sled push — Progressive / loaded or tempo

Targets: quads, glutes, conditioning. **Level:** Intermediate.

Execution: Lean forward in straight line; drive through feet with short strong steps. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops quads, glutes, conditioning strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

313. Sled pull — Foundational / light resistance

Targets: posterior chain, conditioning. **Level:** Beginner.

Execution: Walk backward or forward under steady tension; maintain trunk alignment. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops posterior chain, conditioning strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

314. Sled pull — Progressive / loaded or tempo

Targets: posterior chain, conditioning. **Level:** Intermediate.

Execution: Walk backward or forward under steady tension; maintain trunk alignment. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops posterior chain, conditioning strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

315. Battle rope waves — Foundational / light resistance

Targets: shoulders, cardiovascular system. **Level:** Beginner.

Execution: Stand athletic; alternate arm waves with stable torso and relaxed neck. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops shoulders, cardiovascular system strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

316. Battle rope waves — Progressive / loaded or tempo

Targets: shoulders, cardiovascular system. **Level:** Intermediate.

Execution: Stand athletic; alternate arm waves with stable torso and relaxed neck. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops shoulders, cardiovascular system strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

317. Bear crawl — Foundational / light resistance

Targets: core, shoulders, hips. **Level:** Beginner.

Execution: Crawl on hands and feet with knees hovering; keep pelvis low and controlled. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops core, shoulders, hips strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

318. Bear crawl — Progressive / loaded or tempo

Targets: core, shoulders, hips. **Level:** Intermediate.

Execution: Crawl on hands and feet with knees hovering; keep pelvis low and controlled. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops core, shoulders, hips strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

319. Turkish get-up — Foundational / light resistance

Targets: full-body coordination. **Level:** Beginner.

Execution: Move through elbow, hand, bridge, kneel and stand stages with eyes on light weight. Use body weight, a light band, or light implement; prioritize smooth technique and a comfortable range.

Prescription: 2–3 sets × 8–12 reps; for holds 15–30 s; for carries 20–40 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops full-body coordination strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

320. Turkish get-up — Progressive / loaded or tempo

Targets: full-body coordination. **Level:** Intermediate.

Execution: Move through elbow, hand, bridge, kneel and stand stages with eyes on light weight. Add modest resistance or use a 3-second lowering phase only after mastering the foundational pattern.

Prescription: 3–4 sets × 6–12 reps; for holds 20–45 s; for carries 30–60 m. Rest 60–120 s, longer for strenuous compound efforts.

Benefit: Develops full-body coordination strength, control or endurance; supports functional movement when combined with balanced programming.

Coach checks: Avoid momentum, loss of alignment, breath-holding and painful ranges; exhale through the effort, inhale during the easier phase. Stop or regress if form deteriorates.

Progression, monitoring and decision rules

• Choose 5–8 exercises per session to cover movement patterns: squat, hinge, push, pull, carry, core and optional conditioning. Avoid performing all 320 exercises.

• Record load, sets, repetitions, perceived effort, range of motion, pain response, recovery and adherence. Progress load ~2–5% or add 1–2 repetitions when all prescribed sets are comfortably completed with good form.

• For beginners, 2–3 nonconsecutive full-body sessions per week is a practical starting point. Advanced splits should be chosen by schedule and total workload, not by body-part labels alone.

• For balance and fall prevention, use supported single-leg stance, step-ups, carries and gait tasks, progressing support and complexity cautiously.

• For cardiometabolic health, combine resistance work with walking, cycling, swimming or similar sustained activity. Monitor exertion and symptoms rather than relying only on heart-rate formulas.

• For fat loss, evaluate waist circumference, weight trend, fitness and strength over weeks, not day-to-day scale fluctuations. For weight gain, monitor strength and weight trend while maintaining aerobic health.

• For musculoskeletal discomfort, reduce load/range or switch exercises; persistent pain, swelling, weakness or neurologic symptoms warrant professional assessment.

Sample weekly plans

• Beginner (3 days): Mon squat, push-up, row, bridge, dead bug; Wed hinge, overhead press, pulldown, step-up, side plank; Fri split squat, chest press, cable row, calf raise, carry. Use 2–3 sets per movement.

• Intermediate (4 days): Mon upper push/pull; Tue lower squat/hinge/core; Thu upper press/row/arms; Sat lower unilateral/glutes/calves/conditioning. Include 2–3 aerobic days.

• General health (5–6 days): 2–3 resistance days, 3–5 moderate aerobic days, short mobility most days, balance training 2–3 days for older adults or those at fall risk.
